

Fall Protection Truck Demonstrations

See what it takes to be safe at heights

Our fleet of specialized vehicles can bring on-site, hands-on fall protection demonstrations to your workforce. We demonstrate actual drop-tests with force measuring instruments so workers get a sense of the basics of the arresting forces they may experience during a fall. This provides an excellent introduction to fall protection we refer to as the ABC's of fall protection:

- A** **Anchorage**
are a secure point of attachment. Anchorage connectors vary by industry, job, type of installation and structure. They must be able to support the intended loads and provide a sufficient factor of safety for fall arrest.
- B** **Body Support**
harnesses distribute fall forces over the upper thighs, pelvis, chest and shoulders. They provide a connection point on the worker for the personal fall arrest system.
- C** **Connectors**
such as shock-absorbing lanyards or self-retracting lifelines connect a worker's harness to the anchorage.
- D** **Descent and Rescue**
devices are used to raise or lower a fallen injured worker to safety or retrieve workers or employees from a confined space.
- E** **Education**
is essential. We offer a variety of training and consultative services to fit your needs.
- F** **Fall Protection for Tools**
helps make work environments safer and more productive by reducing dropped object incidents.

Each seminar ends with a Q & A session where you will be able to ask our safety experts specific questions.

To arrange a truck demonstration, please contact your local Fall Protection specialist or 3M Fall Protection customer service at 800-328-6146.
